Behance Portfolio

Summary

UI/UX Designer with a B.Sc. in Computer Science, specializing in data-driven product strategy, user research, and end-to-end product design. I excel in translating complex user problems into intuitive, accessible interfaces through user testing and structured usability methodologies. Currently expanding expertise into design and spatial UI/UX principles for immersive technologies (AR/VR/XR).

Experience

YŪPE-UX/UI Design Intern 08/2026 – 09/2026

- Designed **end-to-end mobile experiences** across onboarding, authentication, financial management, and AI-powered workflows.
- Designed the **Yufi AI experience** and redesigned Finboard flows for expense, income, savings, and transaction management.
- Improved **usability and cognitive load** through simplified user flows, interaction design, and clearer UX writing.
- Built **reusable Figma components and variants** to improve design consistency and scalability.
- Contributed to a fintech product that reached **500+ downloads** after launch.

Projects

PathParcel: Community Parcel Delivery Marketplace | UX/UI Design

PROBLEM: Students and daily commuters have no earning mechanism on routes they already travel. Senders pay ₹50-200 per parcel in delivery costs.

RESEARCH: Conducted user interview and Survey's then identified core insight commuters share fixed routes but lack platform to monetize them.

DESIGN: Two sided marketplace addressing user needs:

- Traveler onboarding with identity verification reducing signup friction
- Zero-Trust photo verification for user confidence and safety
- Route-based job matching for contextual delivery opportunities
- Gamified earnings tracking toward transit pass redemption

DESIGN RATIONALE: Each feature addresses specific user pain points identified through research. Information architecture prioritizes trust and simplicity.

Strata Finance Tracker: AI-Powered Expense Management | UX/UI Design

PROBLEM:Expense tracking apps experience high abandonment due to manual data entry friction—users spend 60 seconds per transaction with minimal value gained.

RESEARCH: Conducted user research identifying core friction point in data entry workflow and user motivation challenges.

SOLUTION: Designed simplified dashboard with AI auto-categorization and predictive insights reducing friction and providing actionable value.

Skills

Design tools

- Figma, Framer, Prototyping Tools, Wireframing Tools

UX Skills

- User personas, Information architecture, Wireframing, Usability testing, Design systems

Certificates

Google UX Design Certificate (Coursera, 2025)

User research, wireframing, prototyping, usability testing

Education

Bachelor of Computer Science, Mumbai University

CGPI: 9.18

06/2023 – 04/2026

Kalyan, Maharashtra
